User Manual for Ecotact Storage Bags*

Ecotact bags are high barrier storage bags which keep grain / coffee farm fresh and intact for a very long duration. They keep the aroma and moisture levels intact.

Refer to the following instructions for a complete guideline:

1

Place the Ecotact Storage Bag on the bag shaper to form the bag shape.

2

For extra protection put a jute bag on the Ecotact Storage Bag. The bag is now ready to be filled with coffee or grains.

3

Start filling coffee or grains from the hopper or manually.

4

When filled, atleast a gap of 40 cm from the bag end should be left empty for twisting and tying the Ecotact Storage Bag.

5

Remove as much air as possible by pressing down the grain/coffee. The filled Ecotact Storage Bag can now be sealed by twisting the remaining plastic.

6

Hold the end of the twisted plastic portion. Close the bag by fastening the cable at the top of the grains.

7

Twist the free plastic portion and fold into two. Tie with another cable near the folded plastic. Use cable tie gun or manually tighten the cable ties.

8

Close/seal the outer jute bag taking care not to puncture the Ecotact Storage Bag inside. Stick the supplied adhesive label "use no hooks" on the outer bag.
